Event brief (500 words with photo):

Macro Photographic Contest

Macro photography is all about showcasing a subject larger than it is in real life — an extreme close-up of something small. Photography is always a matter of perspective. “It’s an alien world when you get into the macro level.” - Ben Long.

Macro photography challenges the photographer to capture the minute, granular details of a world that generally escapes our daily attention: this can include insects, plants, natural and human produced details of any and every subject matter in the world around us – from the texture of feathers to the geometric labyrinth of a microchip board. In the above view conducted this photographic contest to create, spread and share the awareness from their perspective
