Course Objectives:	To acquire knowledge through experimentation on the stiffness, natural freque gyration of a body under damped, undamped, torsional vibrations, critical solutions and damping coefficient of models under free and forced vi	pee	d of	sha	

Ехр. No	Title		
1	Determination of stiffness and natural frequency of undamped spring-mass systems arranged in series, parallel and series-parallel fashions		
2	Determination of effective radius of gyration of an irregular body through torsional oscillation of tri filar suspension		
3	Determination of natural frequency a single rotor un damped shaft system		
4	Determination of natural frequency a single rotor damped shaft system		
5	Determination of critical speed of shaft		
6	Determination of natural frequency and mode shapes of specimens supported at its ends through modal analysis		
7	Determination of damping coefficient of specimens supported at its ends		
8	Forced vibration of specimens supported under simply supported and cantilever boundary conditions – Determination of natural frequency		
	Total Periods: 60		

On completion of the course, the student can

COs	Statements	K - Level
CO1	Experiment with stiffness and natural frequency of spring-mass systems.	K3
CO2	Identify the natural frequencies of damped and undamped torsional vibrations of single rotor systems	К3
CO3	Identify the factors that influence the critical speed of a shaftt supported at its ends.	K3
CO4	Utilize vibration analysis to measure the dynamic characteristics of vibrating systems.	K3
CO5	Identify the natural frequency of specimens under forced vibrations.	K3

Knowledge Level: K1 – Remember, K2 – Understand, K3 – Apply, K4 – Analyze, K5 – Evaluate, K6 – Create
